MISSION PROFILE

Performance | Balanced | Safety

Accuracy 0.60

Fidelity 0.20

Robustness 0.20

CONSTRAINTS

- [ ] Regulatory certification
- [x] Real-time inference
- [x] Sensor drift expected

RECOMMENDED

OURS

Unified Trust Score

0.80

40.8 W	0.64	+14.2%
MAE	τ	Δ@20%

Most accurate; Pareto-dominates every baseline. Minimal degradation under sensor noise. Consensus flags payload as the dominant power driver.

Deploy model

MODEL RANKING

profile: performance-critical

1	**OURS**	(P)	0.80
2	CatBoost		0.76
3	LightGBM		0.69
4	GradBoost		0.69
5	RandForest		0.62
6	Ridge	(P)	0.40
7	XGBoost		0.62

Trust axes are min–max normalised across the model pool (higher is better on each); the Unified Trust Score is their weighted sum. Constraints act as hard filters. Numbers reproduce the paper's held-out flight-telemetry results.
